

E2

Success Story #301

Established in 1959, Proto-Cast specializes in the design and construction of prototype injection molds, hardened steel precision molds for high volume production and short run production. Our team of skilled toolmakers, tool designers, and experienced molding personnel enables us to serve the critical and unique requirements of our widespread industrial part application base. Whether your requirements call for high volume multi-cavity, or low volume single cavity molds, Proto-Cast can fill the requirements.

The Results ...So Far:

We currently use all of the modules from order entry to accounting. We recently acquired the Quality Module and plan on getting to ISO Certifications and I feel the module will help us get and maintain ISO Certification. We have been able to have one person do the scheduling and purchasing so we know exactly what orders are there and what is needed to fulfill the orders.

“We found E2 to not only be cost effective, but exactly what we were looking for in a manufacturing software program.”

*Joseph J. Gizara
Proto-Cast, LLC.*

Why did Proto-Cast Choose E2?

Proto-Cast purchased E2 software 5 years ago after an extensive search and review of several other software packages. Prior to E2 we had a hodge-podge of programs running on different computers without a central server. Our goal was to get everyone on the same page. E2 has done that and more.
