

Our E2 Industry Partner in:

Metal Fabrication

About Beverlin Manufacturing:

A perforated metal tube sounds like a relatively simple concept, until you start asking for details: Square holes or round? At what angle from each other? How big are the holes? Plated or powder coated? The list goes on ...

These are only some of the questions faced by Rick Watson, owner of Beverlin Manufacturing. Beverlin ships tens of thousands of perforated metal tubes each month, each to a different specification than the last. Add a design department, welding services and secondary processing operations, and you've got a shop that simply has to run efficiently.

Why did Beverlin Choose E2?

For Owner Rick Watson and Controller Sandy Reed at Beverlin Manufacturing, modernization was a must. Working with hand written time tickets and an old DOS-based shop management system, they clearly were not getting the efficiency they needed to run the shop profitably. When shopping for new shop software, Rick and Sandy looked for a Windows-based package that was comprehensive, yet easy to use. They evaluated a number of systems before deciding that Shoptech's E2 Software was the right package for Beverlin.

Beverlin Manufacturing

The Results ... So Far:

For Rick Watson, Sandy Reed and Beverlin Manufacturing, the changes that E2 has brought to their shop are "unbelievable." From data collection to job travelers to accounting, everything has changed. Beverlin employees now spend less time sifting through hand-written time tickets and job travelers, and can now have instant access to information that is much more accurate. Their efforts can now be concentrated on production and quality instead of paperwork.
